# IRFAN AWATI

**DEVSECOPS ENGINEER**

Dubai, UAE · UAE: +971-547812618 · IN: +91-9019128316 · imawati080@gmail.com · linkedin.com/in/irfan-ia · github.com/IrfanAwati

## PROFESSIONAL SUMMARY

Results-driven DevSecOps Engineer with 6+ years of experience architecting secure cloud infrastructure across Azure and AWS, automating CI/CD pipelines, and mastering container orchestration. Proven track record shifting security left with automated tooling (Gitleaks, Trivy, Checkov, Kubesec, Falco) and enforcing FinOps frameworks that eliminate cloud waste. Skilled in GitOps (ArgoCD, Flux), Kubernetes security and networking (AKS, NSG, ingress controllers), and Terraform-led infrastructure delivery, with hands-on experience in SOC 2 controls analysis and a track record of mentoring engineers through internal tech talks.

## CORE SKILLS

**Cloud Platforms** Microsoft Azure (IaaS/PaaS/SaaS), AWS (EC2, S3, VPC Networking)

**Containers & Orchestration** Kubernetes (AKS), Docker, Container Instances, Kustomize, NGINX/Istio/Traefik Ingress Controllers

**Infrastructure as Code (IaC)** Terraform, Azure Bicep

**GitOps & Continuous Delivery** ArgoCD, Flux CD

**CI/CD & Automation** Azure Pipelines, Jenkins, GitHub

**Security & Code Quality (DevSecOps)** Trivy (SCA, Vulnerability Scanning & SBOM), Checkov, Gitleaks (Secret Detection), Kubesec, Falco (Runtime Threat Detection), SonarQube, SonarCloud, Embold, Azure Key Vault, Azure Front Door WAF, NSG, DDoS Mitigation, SOC 2 Controls Analysis

**Observability & Monitoring** Datadog, OpenTelemetry (APM & RUM), Infracost

**Data & Messaging** Azure SQL, PostgreSQL, Managed Instance, Service Bus, Event Hub, Redis Cache, Storage Accounts

**Scripting & Automation** PowerShell, Bash

**Methodologies & Tools** Agile/Scrum, Git, Jira, Confluence

**Operating Systems** Linux (Ubuntu/CentOS), Windows, macOS

## PROFESSIONAL EXPERIENCE

**DevOps Engineer** — Lisec Middle East Ltd, Dubai **Aug 2023 – Present**

- Architect a robust GitOps framework using ArgoCD and Flux on Azure Kubernetes Service (AKS), automating 100% of deployments and ensuring consistent environment states through Kustomization.
- Spearhead a “Shift-Left” security strategy by integrating Gitleaks (secret detection), Trivy (vulnerability scanning and SBOM generation), Checkov and Kubesec (infrastructure security gating), and Embold/SonarCloud (code quality analysis) into Jenkins/GitHub pipelines, proactively identifying CVEs, exposed secrets, and code quality issues before production release.
- Strengthen Kubernetes security posture by deploying Falco for real-time runtime threat detection, with hands-on experience across NGINX, Istio-based, and Traefik ingress controllers securing AKS workloads.
- Orchestrate the migration of business-critical, Docker-containerized applications from Azure Web Apps to AKS, optimizing infrastructure costs and enhancing application scalability through Terraform-led provisioning.
- Harden perimeter and network security by engineering custom rate-limiting WAF rules on Azure Front Door — throttling clients after 100 requests per minute — and NSG policies across AKS clusters, mitigating DDoS and brute-force attacks against multi-tenant endpoints.
- Centralize secrets management using Azure Key Vault, integrating secure secret retrieval into both application runtime and Terraform IaC pipelines.

- Own end-to-end reliability for production workloads — from development through deployment — engineering high-availability Azure SQL and PostgreSQL solutions with automated backup/recovery, and establishing observability with Datadog and OpenTelemetry (APM & RUM) that reduce Mean Time to Detection (MTTD) and safeguard customer-facing SLAs across global regions.
- Mentor team members by sharing security findings and hosting internal tech talks, and maintain technical documentation in Confluence to keep the team aligned on emerging tools and best practices.
- Adopt FinOps best practices by implementing granular cost-tracking across subscriptions and configuring budget alerts using Infracost, cutting cloud spend by more than €10,000 annually and eliminating month-end billing surprises.

**Azure DevOps Engineer** — Atlas Systems, Bangalore **Oct 2022 – Aug 2023**

*Clients: Knipper Health (NJ), Himalaya (India), IDT (NJ)*

- Automated end-to-end cloud provisioning using Azure Bicep, ensuring repeatable, error-free deployments of PaaS resources including App Services, Service Bus, Redis Cache, and Event Hubs.
- Governed source code integrity via strict Azure Repo branch policies and integrated SonarCloud into CI/CD pipelines for automated static code analysis, proactively identifying bugs, code smells, and vulnerabilities.
- Conducted SOC 2 compliance analysis across Azure cloud environments, validating security controls to ensure client data was hosted and processed securely.
- Orchestrated complex release cycles across a multi-stage environment pipeline (Dev, QA, SIT, UAT, Production), achieving 99.9% deployment success rates and environment parity.
- Managed full-lifecycle incident response and task prioritization via Jira, consistently resolving service requests and infrastructure bottlenecks within defined SLA timelines.

**Azure DevOps Engineer** — Asistex, Pune **Jun 2020 – Aug 2022**

- Maintained multi-stage CI/CD pipelines for .NET and Java applications, using both YAML and Classic editors to automate the build-to-deploy lifecycle.
- Engineered modular cloud infrastructure using Terraform, implementing workspaces and reusable modules for scalable, consistent Azure environments.
- Executed the migration of 30+ on-premises virtual machines to Azure, improving system reliability, scalability, and disaster recovery capabilities.
- Provisioned and managed AWS EC2 instances and S3 buckets, including VPC networking and security group configuration, to support cross-cloud infrastructure requirements.
- Strengthened code health by implementing SonarQube for automated code quality gates and security analysis, reducing technical debt across the development team.
- Streamlined operational workflows by developing custom PowerShell automation scripts, reducing manual task overhead and improving delivery speed.

## EDUCATION

**Bachelor of Engineering, Mechanical Engineering** Jun 2019

Dayananda Sagar Academy of Technology and Management, Bangalore, Karnataka

**Diploma in Mechanical Engineering** Mar 2016

Raibag Polytechnic, Raibag, Belgaum, Karnataka

**Class X, CBSE Board** Mar 2013

Shri Mahaveer English Medium School, Raibag, Belgaum, Karnataka

## CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Fundamentals (AZ-900)
