Dear Hiring Manager,

I am writing to express my interest in DevOps and DevSecOps Engineer opportunities with your organization. With 6+ years of experience architecting secure cloud infrastructure across Azure and AWS, automating CI/CD pipelines, and embedding security into every stage of the delivery lifecycle, I bring a DevSecOps-first approach to building infrastructure that is reliable, cost-efficient, and secure by design.

In my current role as DevOps Engineer at Lisec Middle East, I architected a GitOps framework using ArgoCD and Flux on Azure Kubernetes Service (AKS), and led a "Shift-Left" security strategy that integrates Gitleaks, Trivy, Checkov, Kubesec, and Falco directly into CI/CD pipelines to catch vulnerabilities, exposed secrets, and misconfigurations before they reach production. I have also hardened perimeter security with custom WAF and NSG rules, centralized secrets management through Azure Key Vault, and taken end-to-end ownership of production reliability — from development through deployment — to safeguard customer-facing SLAs.

Beyond the technical build, I bring a track record of measurable impact: I adopted FinOps practices that cut cloud spend by more than €10,000 annually, conducted SOC 2 compliance analysis to validate client data security, and have hands-on experience with AWS (EC2, S3, VPC networking) alongside my primary Azure expertise. I also mentor team members through internal tech talks, sharing security findings to keep the wider team aligned on emerging tools and best practices.

I hold Microsoft certifications in Azure Administration (AZ-104) and Azure Fundamentals (AZ-900), and I am committed to continuously deepening my expertise in cloud and Kubernetes security. I would welcome the opportunity to discuss how my experience in secure, cost-efficient infrastructure delivery could contribute to your team's engineering goals.

Thank you for your time and consideration.

Warm regards,
**Irfan Awati**
